

Change

Discussion Question

1. **Change is linked to time.** How is change linked to time? Are all changes linked to time in the same way? How do some of your examples of change relate to time?
2. **Change may be positive or negative.** What is progress? Does change always represent progress? How could a change be both positive and negative?
3. **Change may be perceived as orderly or random.** Can we predict change? Select specific examples of change, and describe which aspects of these changes can be predicted and which are unpredictable. Even when we know a change will take place, can we always predict exactly how things will turn out?
4. **Change is everywhere.** Does change apply to all areas of our world? What are some specific changes that are universal, or that happen everywhere, and some specific changes that may apply to only a particular area at a given time?
5. **Change may happen naturally or be caused by people.** What causes change? What influence do people have over changes in nature? What influence does nature have over the changes people intend to make?
